

Contagion Propagation: Contagion From AAPL to Supply Chain

AAPL (Technology) — Total Outgoing Excitation

AAPL $\rightarrow$ AMD (Semiconductors)

Time (hours from start of July 2022)

Only channels with peak excitation >20% of the strongest receiver are shown (6 near-zero pair(s) omitted). Remaining pairs exhibit near-zero directed excitation, consistent with the graph's sparsity (mean active out-degree 0.96).
